6

Class/ Workshop Thursday: 9:00 - 13:00 Online

Course Coordinator A

inator Ashish Sharma (AS)

and Lecturer email: a.sharma@unsw.edu.au

office: School of Civil and Environmental Engineering, Kensington CE307

phone: 9385 5768

Lecturer Fiona Johnson (FJ)

email: f.johnson@unsw.edu.au

office: School of Civil and Environmental Engineering, Kensington CE309

phone: 9385 5768

Raj Mehrotra (RM)

email: r.mehrotra@unsw.edu.au

office: Water Research Centre, Kensington

phone: 9385 5140

Seokhyeon Kim (SK)

email: seokhyeon.kim@unsw.edu.au

office: Water Research Centre, Kensington

phone: 9385 6156

INFORMATION ABOUT THE COURSE

An introduction to lumped and distributed catchment runoff models; an introduction on the rationale used for model verification and validation, model development and parameter estimation; Bayesian methods for estimating model parameters; reservoir and channel routing; reservoir operation and design; wetland design and conceptual processes; introduction to hydrologic time series characterization and stochastic modelling in the context of water resources management; Climate change: Bias correction and downscaling models.

HANDBOOK DESCRIPTION

See link to virtual handbook:

https://www.handbook.unsw.edu.au/undergraduate/courses/2020/CVEN9612/

OBJECTIVES

Objective of the course is to impart advanced knowledge in Water Engineering with a focus on Hydrology and Water Resources Engineering methodologies. The course consists of two halves, both being taught as online courses. The first part focuses on catchment surface models, and the second part focuses on water resources management.

TEACHING STRATEGIES

The teaching strategies that will be used include:

Lectures that will focus on the development and application of the development of rainfall-runoff models, ca

calibration/validation, and how to undertake data and modelling analysis using a range of statistical and other analytical approaches in a changed climate.

After successfully completing this course, you should be able to:

Lea	arning Outcome	EA Stage 1 Competencies
1.	Perform rainfall runoff modelling using conceptual models	PE1.1, PE1.5, PE2.2, PE2.3
2.	Perform semi-distributed hydrologic modelling.	PE1.2, PE2.2, PE2.3
3.	Understand differences between conceptual and distributed models	PE1.2, PE2.2, PE2.3
4.	Understand the basis for model calibration and validation	PE1.1, PE2.2, PE2.3, PE3.3
5.	Assess reservoir sizing and operation	PE1.1, PE2.2, PE2.3, PE3.3
6.	Perform simple time series analysis and use this to quantify uncertainty	PE1.2, PE2.2, PE2.3
7.	Assess implications of climate change on reservoir operation and learn how to correct systematic biases in climate model simulations	PE2.2, PE2.3, PE3.3

For each hour of contact it is expected that a student will put in at least 1.5 hours of private study.

COURSE PROGRAM

The course schedule tabulated below shows the main topics and approximately how long will be spent on each topic in lectures. Please note that the lecture durations and sequence of topics is a guide only; there may be some variations. However, details on the associated assessment tasks should not be affected; if they

6	No lectures		
7	29/10/2020	AS	 Introduction, reservoir design and operation Reservoir simulation methods, definition of storage capacity
8	05/11/2020	AS	 Storage capacity (continued) Class workshop: reservoir design and storage
8	03/11/2020	AS	 Introduction to simple time series models Class workshop: time series models

9 12/

- Assignments (55%)
 - * #1: Rainfall-Runoff Modelling and Computation (25%)
 - Part 1: Runoff routing and model calibration (15%, due on: 2 Oct, marks returned: 8 Oct)
 - Part 2: SMART (10%, due on: 29 Oct, marks returned: 12 Nov)

 * #2: Reservoir Modelling Application (30%, due on: 24 Nov, marks returned: 26 Nov)
 - * Note that an absolute fail for an assignment automatically occurs when the penalty for a late submission excesses the mark limit (i.e. your mark -
- Final Exam (45%): online, 2-hour duration during the T3 examination period (27 Nov 10 Dec)

RELEVANT RESOURCES

There is no subject textbook but a number of recommended reference books for this course are as follows:

- Handbook of Hydrology (1992), by D.R. Maidment (Editor in Chief); published by McGraw-Hill, Inc.
- Water Resources Engineering (2001), by L. W. Mays; published by John Wiley & Sons Inc.
- Applied Hydrology (1988), by Chow, Maidment and Mays; published by McGraw-Hill Inc.
- Hydrology, An Australian Introduction (2008), by Anthony Ladson; Oxford University Press.

Appendix A: Engineers Australia (EA) Competencies

Stage 1 Competencies for Professional Engineers

	Program Intended Learning Outcomes		
	PE1.1 Comprehensive, theory-based understanding of underpinning fundamentals		
d)	PE1.2 Conceptual understanding of underpinning maths, analysis, statistics, computing		
Knowledge Skill Base	PE1.3 In-depth understanding of specialist bodies of knowledge		
PE1: Knov and Skill
